PRECOG HEALTH

Product Summary

A software that provides a real-time **integrated dashboard, daily prioritized worklists, quality alerts and notifications** to physicians, CDI, HIM and quality and safety directors.

Why PRECOG HEALTH?

With an ever-increasing focus on quality measures and value-based reimbursement, it's vitally important to have a smart, intuitive and prioritized patient review process to focus on documentation that matters most.

How It Works

Maximizing revenue for quality-based reimbursement programs just got easier. PRECOG HEALTH's proprietary software helps Clinical Documentation Improvement (CDI), Health Information Management (HIM) and Quality Improvement (QI) teams identify and prioritize hospital accounts that could have a negative impact on quality-based incentive payments. Through integration with a hospital's electronic medical record and billing system, the software provides real-time insight into how a coded patient account will impact various quality measures and the dollar impact of those results.

Solutions

Live

Maryland Hospital Acquired Conditions (MHAC's)

Future Development

Patient Safety Indicators (PSI's)
Quality Based Reimbursement (QBR) Performance
National Potentially Preventable Conditions (PPC's)
Mortality
Pediatric Measures
Ambulatory Measures

Enterprise Value

Help CFOs understand, plan and optimize incentive-based reimbursement

Inform clinical operation managers on where to deploy resources to improve patient care and outcomes

Help Medical, Quality, and Safety Directors focus on quality outcomes and patient safety

About Us

PRECOG HEALTH was founded with the goal of helping hospitals efficiently and accurately code medical records such that the excellent care the hospital provides equals the care measured. We believe that when quality and safety teams can trust that medical records are documented accurately, coded correctly and harmful events are appropriately identified, they can better focus their resources on preventing those harmful events in the first place.
